WINDSHIELD PROTECTION FILM

**THE INVISIBLE SHIELD FOR YOUR WINDSHIELD**

WPF

CERAMIC PRO

## Always Covered. Always Protected.

It's easy to take your windshield for granted, until the unexpected happens. From daily highway driving to weekend adventures, your glass faces constant threats from rocks, debris, and road hazards.

**Ceramic Pro® Windshield Protection Film** creates an invisible shield that absorbs the impact before it reaches your glass. Designed with advanced TPU technology and a hydrophobic top coat, WPF defends against chips, pits, and scratches while keeping your view crystal clear.

Your windshield is the largest and most vulnerable piece of glass on your vehicle. Protect it and protect your peace of mind with Ceramic Pro® WPF, so you can drive with confidence every mile of the way.

# Why Ceramic Pro® WPF?

## **BUILT FOR MODERN WINDSHIELDS**

Every mile brings new challenges. Today's windshields are no longer just glass, they integrate ADAS sensors, head-up displays, antennas, and heating elements that are vital to safety and performance. Ceramic Pro® Windshield Protection Film shields against rock chips, scratches, and surface wear, preserving both the glass and the technology built into it. Proven in impact and abrasion testing, it delivers dependable protection you can trust.

## **KEEP YOUR ORIGINAL GLASS**

Replacing a windshield today can cost thousands. Even with insurance, aftermarket glass often reduces clarity, weakens structural strength, and may compromise ADAS calibration. Ceramic Pro® WPF helps you avoid those risks by keeping your factory windshield intact, saving you money while preserving safety and value.

## **INTERIOR COMFORT AND UV DEFENSE**

Ceramic Pro® WPF is engineered to protect more than glass. It blocks 99 percent of harmful UV rays, reduces solar heat, and prevents fading and damage inside the cabin. The result is a cooler, more comfortable ride and long-lasting protection for your interior.

## **CRYSTAL CLEAR VISION**

The Invisible protection, Ceramic Pro® WPF bonds seamlessly to your windshield while preserving perfect optical clarity and ensuring HUD and sensor accuracy.

## **PRESERVE YOUR VALUE**

A factory windshield in pristine condition enhances the value of your vehicle. Ceramic Pro® WPF prevents damage and maintains your car's original appearance, ensuring long-term protection for your investment.

# Care and Maintenance

## CLEANING

The easiest way to maintain your Ceramic Pro® Windshield Protection Film is with gentle, regular care.

- We recommend hand washing with a mild car soap and a soft microfiber mitt/cloth. Always rinse the glass thoroughly with clean water before washing to remove loose dirt and grit.
- If you use a pressure washer, keep the nozzle at least three feet away from the windshield and never aim directly at the edges of the film to prevent lifting.
- Avoid using abrasive materials such as aggressive towels, brushes, or scrapers on the film
- Once clean, dry the glass with a soft microfiber towel to prevent water spots.

Ceramic Pro WPF can also be cleaned using traditional automotive ammonia free glass cleaners. Work in a cool and shaded area. Spray glass cleaner directly on the WPF or on a towel to wipe debris and follow with a clean and dry microfiber towel.

## PROFESSIONAL MAINTENANCE AND PROTECTION

To keep your windshield film looking its best and performing like new, we recommend adding Ceramic Pro Sport both immediately after installation as well as annually to ensure that it remains hydrophobic and reduces friction when wipers are utilized. This adds an extra layer of slickness, makes cleaning easier, and helps the film resist everyday contaminants.

### CERAMIC PRO SPORT IS PROFESSIONAL USE ONLY

#### HOW TO APPLY:

- Start by rinsing the windshield with clean water to remove dirt.
- Wash with a mild soap or window cleaner and dry with a microfiber towel.
- Apply Ceramic Pro Sport on to a wet microfiber applicator pad, then apply a light even layer over the entire film. Apply thick enough that the Sport does not dry prior to wiping with a clean and dry microfiber towel.
- After application of Ceramic Pro Sport the Ceramic Pro WPF should feel slick and be clear with no streaks.
